

Work Safe Incident Management System

Costech's incident investigation system has two purposes.

- (1) The first provides you with the ability to efficiently and effectively record any and all accidents or incidents that take place in an OSHA compliant report. Additional information such as eye-witness accounts, images, voice recording and videos of the incident scene can also be saved to help maintain a complete accounting of every incident.
- (2) The second process is to analyze incident reports to assist and identify causes and assign corrective action to help prevent further mishaps. While analyzing the system will provide a breakdown on the
 - Number of incidents by classification, shift incident occurred, body part injured, type of injury, and equipment type.
 - Identifies total number of incidents per facility or location by month.
 - Cross references all incident reports with the training records of the person involved.

Both options 1 and 2 will produce printable results if required.

Environmental, Safety and Health Training System

Increasingly, site-specific programs are required to meet both the letter of and the intent of EPA, OSHA, and DOT regulations. Our interactive web based programs deal with most industrial health and safety topics as well as company specific programs tailored to the issues in your workplace.

In a time when regulations seem to be creating such a burden on industry, we strive to simplify compliance while increasing safety and productivity in the workplace.

Monitoring, Recording and Reporting

Monitoring, recording and reporting systems provide the corporate training staff with the feedback and analysis that is critical to performing their jobs. It will provide detailed information about what a learner has achieved, their performance and problem areas.

Course Customization and Development Services

We recognize that no two companies' environmental, safety and health training programs will be the same. That is why every Costech's online safety system, is fully customizable. This means your training programs will not only reflect your unique corporate identity and policies, but will meet all the regulatory compliance issues needed for your employee training programs.

We can also convert every topic, every course in your employee learning library into an interactive easy to use format. If you have an important new topic that needs to be broadcast to any or all of your employee population, we can usually add it to your library in a day or so, and verify that every employee sees it.

COSTECH TECHNOLOGIES

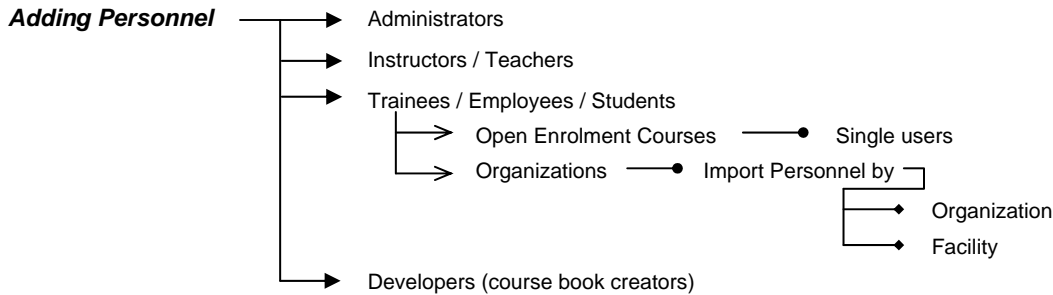

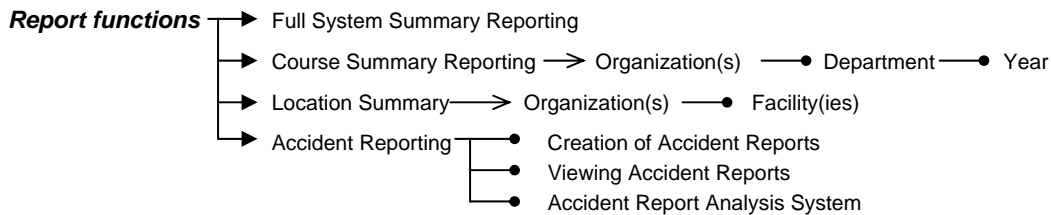

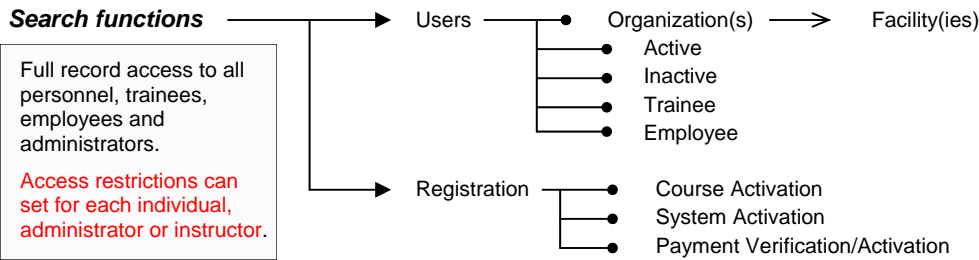

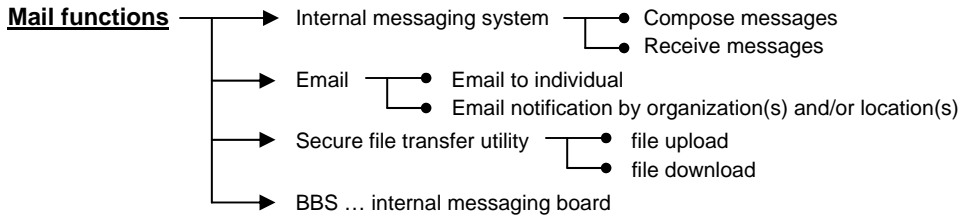

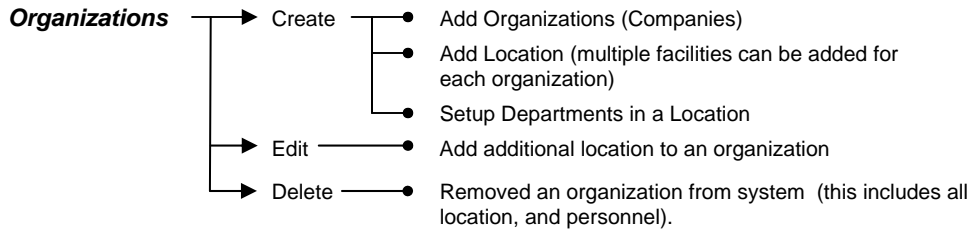

Safety is Everyone's Responsibility

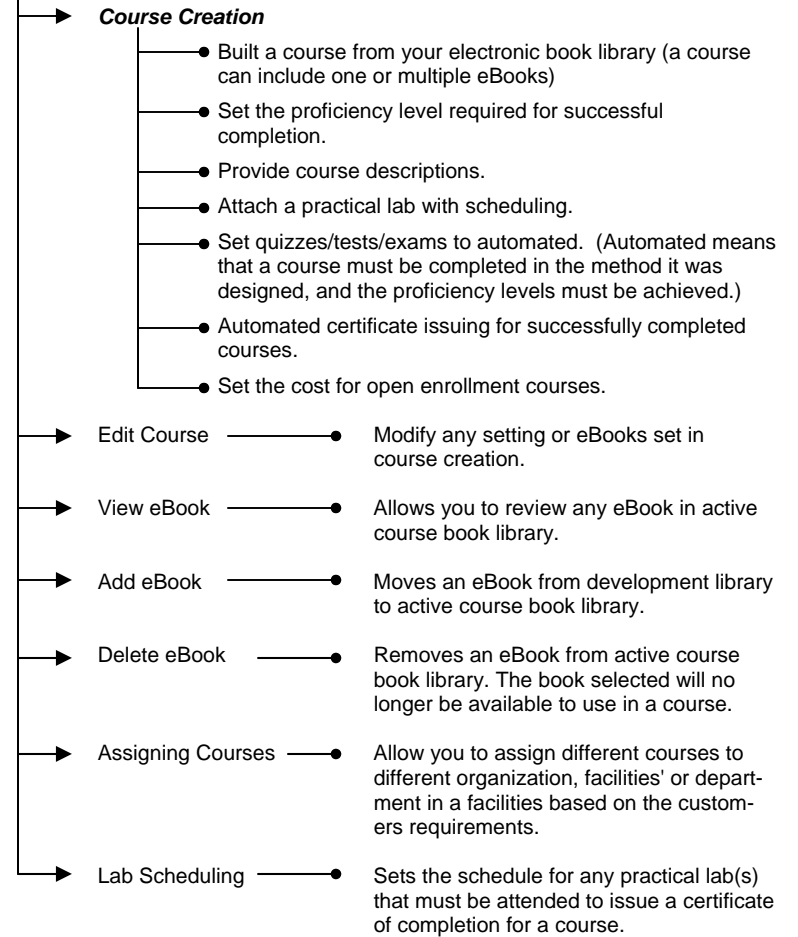

Business and industry have an obligation to provide a safe and responsible work environment for their employees.

Our single source system ensures that every employee completes their required programs, and that you have thorough tracking and documentation available online, 24/7.

System Components

Course(s)

Self-teaching Module

Online Course Books (eBooks)

This is the course cornerstone of your course, it provides a standard of learning that will act as a focal area, helping to maximize the effectiveness of course content, allowing all learners to benefit through standardized directives.

Quizzes / Tests / Final Exams (Auto correcting, instant results.)

To help learners understand the material they are learning the proficiency level requirement can be set. Learners will be required to meet these levels before he/she can progress to next topic or book.

Randomization and question replacement helps ensure a learner has retained the course information by eliminating the chance of cheating by copying previous test responses.
